OPTIMA BRAKE PADS

Yucel Export and Import was established in 1994 in Durban, KZN. As a qualified engineer in the shipping industry since 1981, Erdogan Yucel identified a gap in the South African market for quality automotive parts which were expertly manufactured yet affordable.

1994 saw the birth of Yucel with distribution of quality automotive parts for the aftermarket industry as the primary function. The company prospered and branches were opened throughout SA. As an expert in the engineering field, the progression into product research and development was natural. 20 Years later, due to the increasing demand, it became obvious that a solution needed to be found. Our manufacturing plant was the answer.

Today the plant boasts 2400 square metres with a capacity of 75 000 sets of brake pads per month. Optima has been established as a superior brake pad for the passenger and light commercial vehicle markets. Our technical researchers are currently in the process of developing products for heavy duty vehicles as well as a product in the brake lining field. We are excited to announce the launch of the new product lines for later this year. Optima brake focuses on providing a flexible and fast service, short delivery time, approved quality and competitive prices.

Our customers benefit from the high quality standards that Optima disc brake pads adhere to. Our experts

Positive Moulding Technology

Positive Moulding Technology is an important factor in production of OPTIMA products. Positive molding results in a more uniform density in the production of the brake pad. It also allows using less resin content in formulation of the brake pad which can lead to improvement in the fading characteristic of the brake pad. The brake pads produced by positive molding process is proven to have much better stopping performance. High resin increases fading, which can increase stopping distances up to 50%.

All OPTIMA brake pads are manufactured using the same positive molding process utilized by Original Equipment suppliers. Positive molding uses extreme pressure to compress the friction material and bond it to the backing plate. This process assures consistent friction material density throughout the pad, resulting in even wear and performance characteristics throughout the life of the brake pad.

- 100% Non Asbestos
- Least Dust And Wear On Brake Pads and Brake disc
- Slotted & Chamfered For Stronge Grip & Heat Transfer.
- Minimum Noise Due To Our Specially Formulated Friction Compound Mixture.
- Stylish Packaging Of Brake Pads For Excellent Emphasis Of The Sales Value.

Our backing plates are produced by high quality steel, which has a strong ability to hold the braking system together so it can work properly; the friction materials are attached to one side of the brake backing plate. Our brake backing plates are all meet the international standards, including the hardness, smoothness, and thickness, which will give a steady and comfortable braking; it can make you safe all the way along.

Proudly Manufactured
